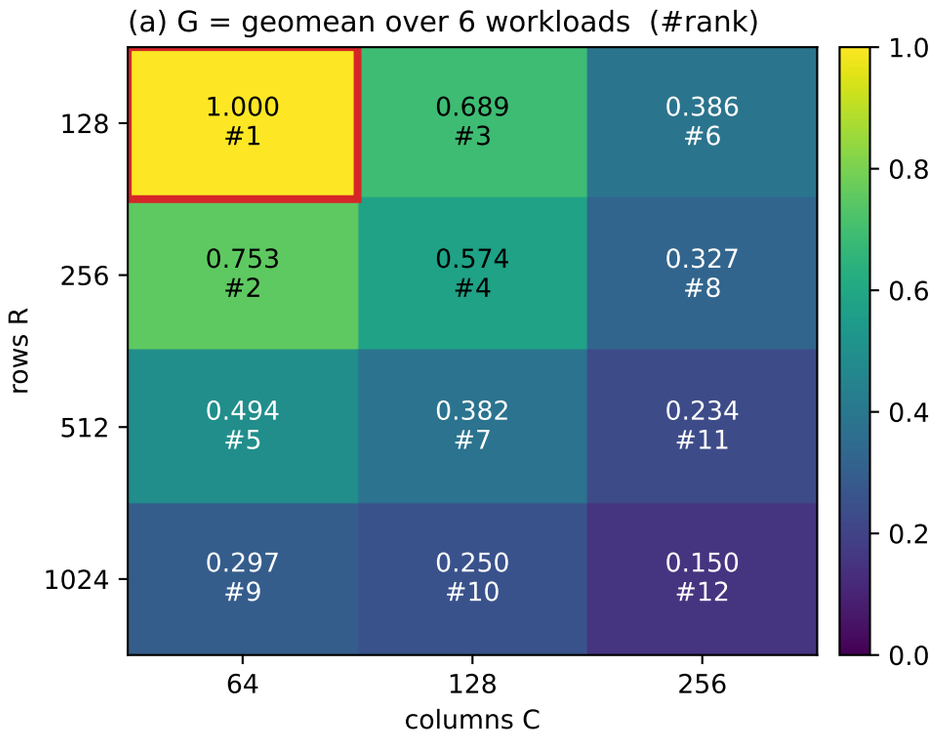
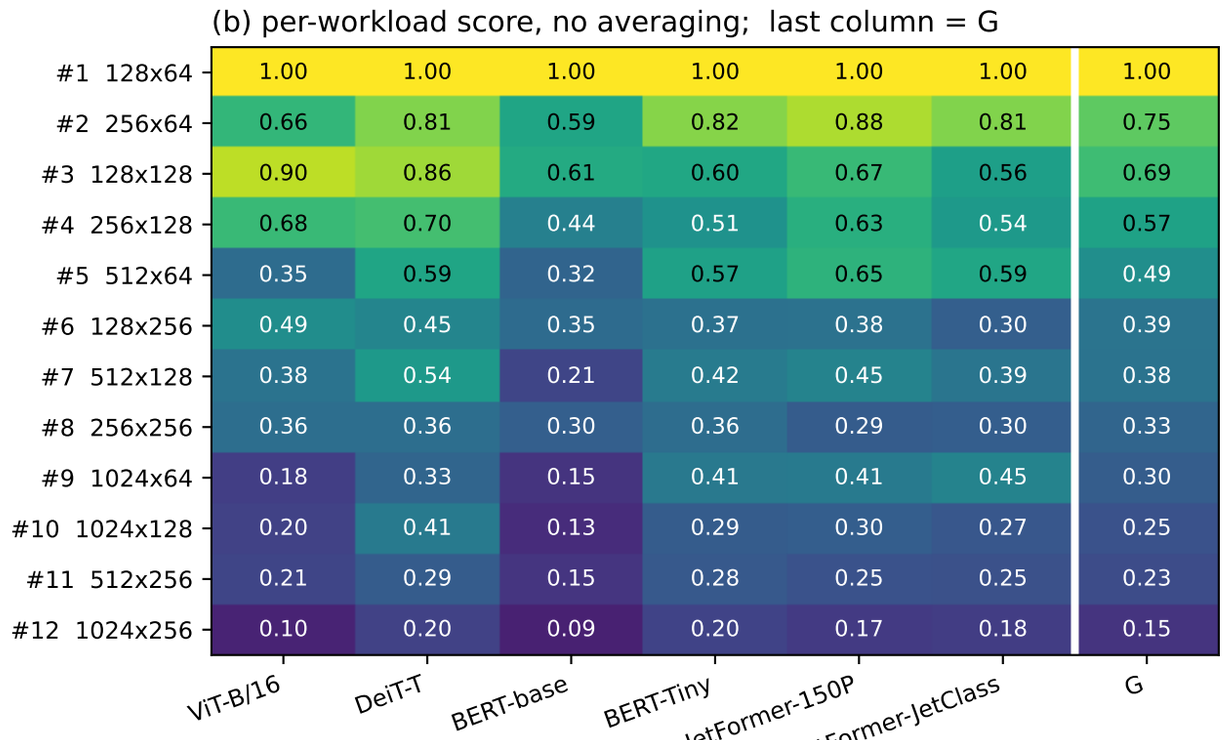
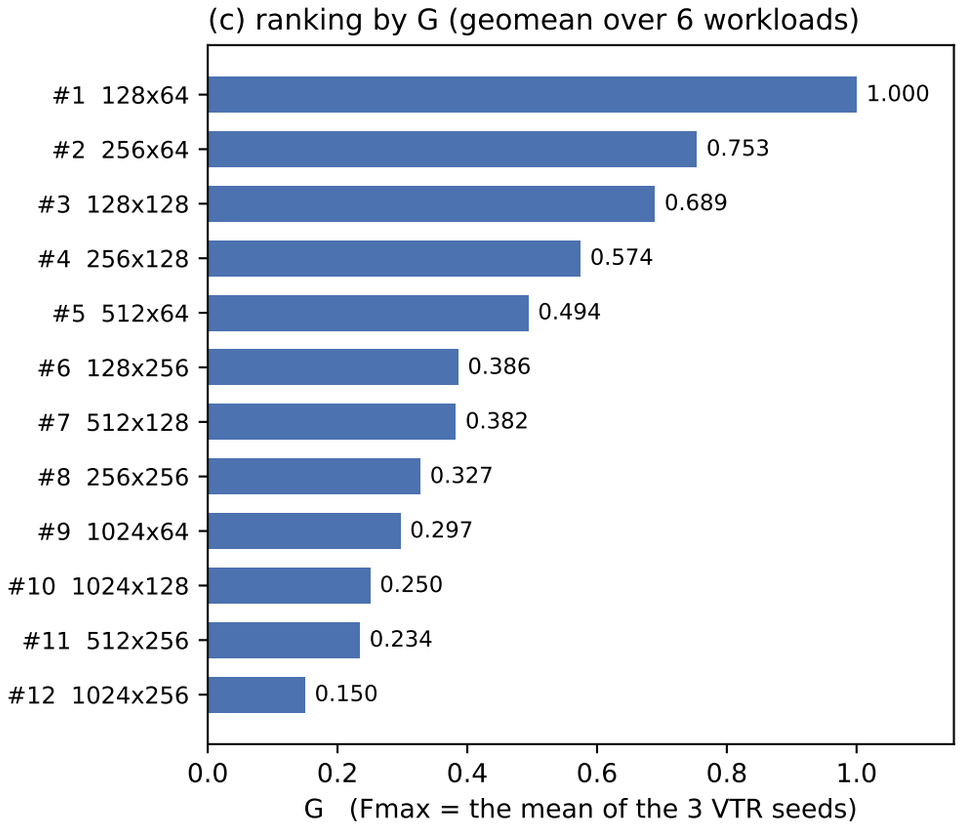
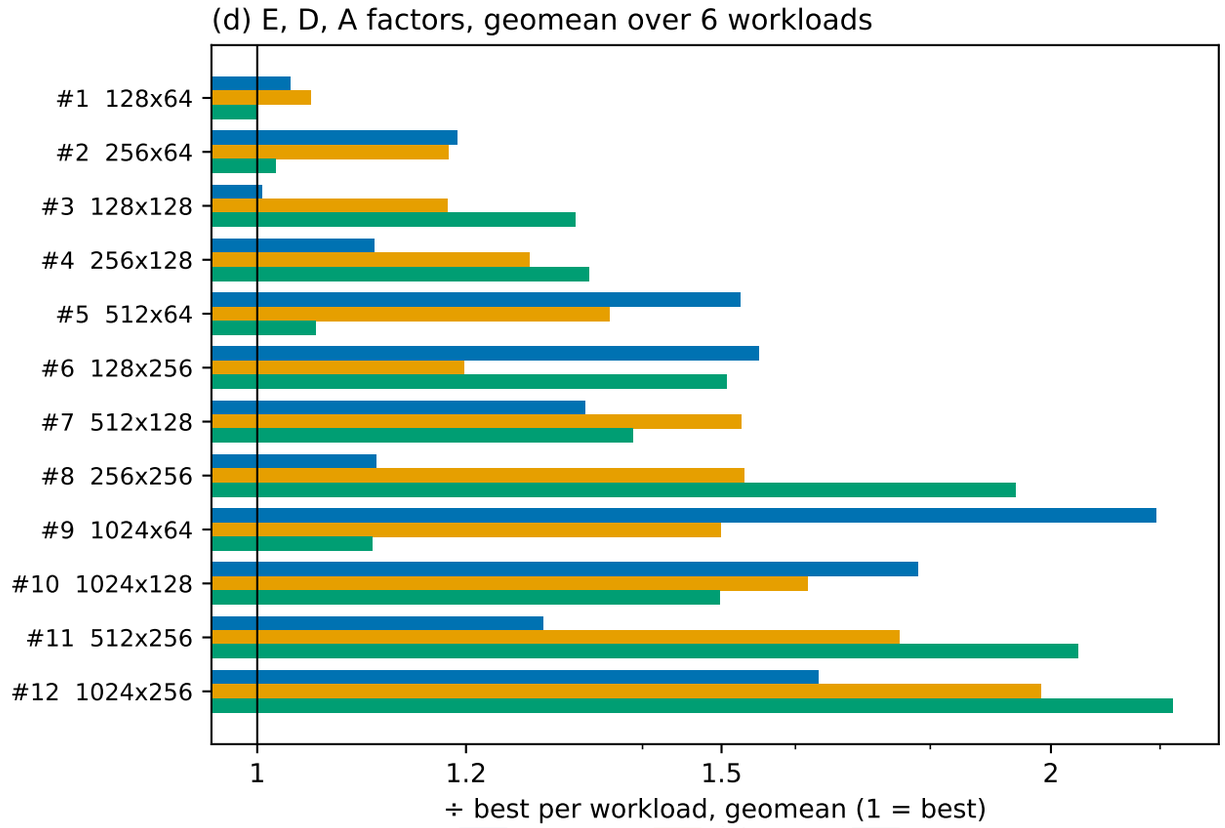
Attention head — crossbar ranking by EDAP








Workloads (6): one head, (n, d_model, d): ViT-B/16 (256, 768, 64), DeiT-T (256, 192, 64), BERT-base (128, 768, 64), BERT-Tiny (128, 128, 64), JetFormer-150P (32, 64, 32), JetFormer-JetClass (128, 128, 16). The 16 builds of the d = 64 shapes at C = 64 are priced from VPR's memory count (5–8 blocks above the simulator's prediction). EDAP = energy × latency × area. Per workload: score = best EDAP ÷ EDAP (1 = best). G = geomean of the 6 scores.
